Airon®

Press release

San Jose, California, 19 March 2024. Introducing Airon — private bare-metal AI infrastructure powered by NVIDIA®. Airon provides private non-shared AI resources, guaranteeing performance and the safety of your confidential data and proprietary models. Allocate, accelerate and control with Airon.

Key Features

Capability without lead time or complexity: Demand for AI resources outstrips supply. Guarantee AI capability by allocating necessary resources.

Security with zero-trust: Retain full control over sensitive and proprietary data with private infrastructure.

Performance with bare metal: Bare metal servers offer an unbeatable price-performance ratio compared to the cloud.

Availability and Pricing

The first batch of 512 GPUs (NVIDIA® HGX™ H100) is released and available to allocate on a first-come, first-served basis. Pricing starts from $3.6 an hour on a 12-month commitment. For more information, visit https://airon.ai.

The infrastructure is deployed during Q2 and Q3, to HPC data centers in the Nordics, Europe. Next-generation Blackwell B200 revealed at NVIDIA GTC, will be available later this year and are open for pre-booking.
